

to whom it may concern, i know that the xm radio is a great way of direct communication. with numerous choices of news weather and entertainment, without multiple local advertisements. Through out the rockie mountains while travelling nobody gets continuous and clear reception on local radio stations. versus, xmradio gives us crisp and clear reception through out the journey wether the drive is through the hills and mountains or on plains. think of the thousands of people who lives on the remote places away from the towns where they have no access of local radio station, whereas they still can get news loud and clear on xm radio. I strongly feel that xm radio should be allowed to broadcast news , weather and entertainment without any restrictions. Driving on the highways has become much easier for those who hears news. traffic news and weather news. I feel all the automobiles should carry xmradio. make it a law. thanks. mukesh patel.
